Albert Elezer B. Perez

Mandaluyong, PH | +63 939 474 0226 | albperez.dev@gmail.com | LinkedIn | GitHub

Technical Skills

Languages: Python, Bash, SQL (PostgreSQL), JavaScript
Frameworks: Dagster, dbt, Airflow, FastAPI, Django
Data: Amazon Redshift, Snowflake
Tools: Linux, AWS, Docker, Git, Gitlab CI

Experience

Stratpoint Technologies — Mandaluyong, PH
Data Engineer III — *Feb 2026 – Present*

- Migrated legacy ACL-based fraud detection (20+ Pre-Audit scripts) to dbt and Dagster on Amazon Redshift, mapping source tables and fields to 10+ gold-layer fraud models; authored technical and business documentation reviewed by the client's Lead Data Engineer.
- Built a config-driven delivery framework using Python and Amazon S3 that publishes gold-layer views to REST APIs, databases, and JSON files through YAML configs, replacing use-case-specific implementations with reusable configuration.
- Delivered 10+ ingestion pipelines across bronze, silver, and gold layers, with dynamic PII masking, a reusable dbt macro for data policies, and dbt Docs extended with asset health scoring and PII classification.
- Cut pipeline runtime by 57% by parallelizing I/O-bound Dagster jobs with multithreading; added Microsoft Teams success/failure alerts, replacing manual dashboard checks.

Undisclosed Hedge Fund — Singapore, SG
Data Engineer — *Aug 2024 – Feb 2026*

- Built an LLM-powered broker research pipeline that ingests reports, extracts structured data, clusters them into market narratives, and orchestrates LLM agents to generate research reports automatically.
- Engineered a cross-platform meeting bot for Zoom, Microsoft Teams, and Google Meet that automates call participation, transcript capture, and structured summarization.
- Implemented LLM-based asset identification and sentiment analysis on news and research, increasing structured data coverage by 30%; automated executive email reports for high-impact news and economic releases.
- Developed and maintained 50+ production pipelines across APIs, SFTP, Amazon S3, Snowflake, and alternative data sources, processing 30GB+ daily.

Thinking Machines Data Science — Taguig, PH
Data Engineer Intern — *Jun 2024 – Aug 2024*

- Extended internal data engineering templates with Airflow and Dagster sample projects (Spotify and Reddit ETL), reducing onboarding and project setup time for new engineers.
- Led a team knowledge-sharing session on Dagster's asset-centric workflows.

Projects

Personal Data Warehouse Platform | *Dagster, dbt, PostgreSQL, MinIO, Docker, Python* — Sep 2026 – Present

- Built a local data warehouse implementing medallion architecture (bronze, silver, gold) with reusable Dagster components for bronze ingestion, dbt pipelines, and LLM enrichment.
- Provisioned PostgreSQL (pgvector) and MinIO object storage with Docker Compose and mise tasks, enabling one-command local setup of the full stack.
- Structured one shared dbt project (bronze_stg, silver, gold) with config-driven dataset definitions (YAML schemas and fixtures) so new sources onboard without new pipeline code.

Education

Ateneo de Naga University — Naga City, PH
Bachelor of Science in Computer Science (Magna cum laude) — *2021 – 2025*
